

VEDANT VERMA

Software Engineer | Java • Distributed Systems • Cloud • Data

Dublin, Ireland • +353 83 172 1627 • vedantvermaimpmail@gmail.com • [LinkedIn](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Software engineer with 3+ years building and running distributed backend services and REST APIs in production with Java and Spring Boot, backed by strong CS fundamentals in object-oriented design, data structures, and algorithms. Experienced with PostgreSQL, event-driven architecture, cloud (AWS and GCP), and CI/CD, with production monitoring, troubleshooting, and performance optimisation. Recent experience spans a GCP data-pipeline migration for a UK financial institution and account-security / fraud analysis. Uses AI-assisted development tools daily and holds an MSc in Information Systems from University College Dublin.

PROFESSIONAL EXPERIENCE

Customer Support Engineer

Jul 2026 – Present

Teleperformance (for a leading social media platform) Dublin, Ireland

- Investigate suspicious account activity and detect fraud, acting quickly to protect users and keep accounts secure.
- Handle sensitive, high-stakes account-recovery cases, making sound judgment calls under pressure and following security and compliance procedures.
- Guide users through securing and regaining access to their accounts, delivering a careful, high-quality experience in an SLA-driven environment.

GCP Architect (Contract)

May 2026 – Jun 2026

WiproRemote

- Led the cloud architecture and DevOps for a proof-of-concept engagement with a leading UK banking and financial institution, migrating data pipelines from IBM DataStage to Google Cloud Platform (GCP).
- Built the pipeline using PySpark for distributed data processing and Apache Airflow for orchestration, with automated CI/CD deployment submitting jobs to GCP clusters that transformed raw financial data into curated data assets.
- Led a team of 3 engineers on GCP data-engineering practices, managing cluster provisioning and compute for scalable, repeatable job execution.

Software Engineer

Jul 2021 – Aug 2024

ClearTrail Technologies Pvt. Ltd. Indore, India

- Designed and implemented a multi-tenant microservices architecture using Java, Spring Boot, and PostgreSQL, enabling scalable SaaS deployments with strong tenant isolation.
- Developed stateless REST APIs and modular, extensible backend components for communication between ETL and analytics services across distributed systems.
- Implemented usage-based metering pipelines integrated with Stripe for automated billing, invoicing, and financial auditing, and built data pipelines to publish billing events to payment services.
- Designed event-driven, message-based workflows using AWS SNS and S3 triggers to orchestrate asynchronous microservice communication, improving reliability and scalability.
- Improved distributed-system execution performance by over 300% using JProfiler, resolving concurrency issues, memory leaks, and thread contention in clustered, scheduled workloads.
- Owned critical backend services (Scheduler, Notification, Product Logging, Data Summarisation), ensuring reliability through monitoring, log analysis, and incident resolution.
- Coordinated bi-weekly SaaS releases across teams, provided task estimations and complexity analysis, and built a schema-flexible dataset reuse architecture that reduced duplication.
- Worked in Agile environments (Jira, GitLab, CI/CD), wrote unit and integration tests, took part in code and design reviews, and mentored incoming developers.

Software Engineering Intern

Jan 2020 – Jun 2020

Hinduja Tech Ltd. Pune, India

- Analysed automotive datasets using Pandas, NumPy, and Seaborn to derive insights, applied NLP for sentiment analysis on scraped web and social-media content, and built Python web-scraping and text-mining scripts.

EDUCATION

M.Sc. Information Systems

Sep 2024 – Aug 2025

University College Dublin | GPA 3.63/4.20 (Second Class Honours, Grade 1) Dublin, Ireland

B.Tech. Information Technology

Jul 2017 – Jun 2021

Symbiosis Institute of Technology | CGPA 7.13/10 Pune, India

TECHNICAL SKILLS

Languages: Java (Core Java, Collections, Concurrency & Multithreading), Python, SQL, JavaScript, TypeScript, C++, Shell Scripting; Scala & Angular (coursework)

Backend & Distributed: Spring Boot, Microservices, REST/JSON APIs, Distributed Systems, Event-Driven Architecture & Messaging (AWS SNS/S3), Third-Party API Integration (incl. Stripe), Django

Cloud, Data & DevOps: AWS (S3, SNS, Lambda), GCP, PySpark, Apache Airflow, Docker, Kubernetes, Kafka, Spark, Databricks, CI/CD (Jenkins, GitLab), Git, Maven

Databases: PostgreSQL, MongoDB, Elasticsearch, Redis, SQL, Schema Design, Query Optimisation, Data Modeling

AI/ML & Tooling: Machine Learning & NLP (MSc coursework, thesis & projects), Pandas, NumPy, LLM API Integration, AI-Assisted Development (Copilot, Claude, Cursor)

Practices: Object-Oriented Design, Data Structures & Algorithms, System Design, Unit & Integration Testing, Observability & Monitoring (Grafana, Prometheus, NewRelic), Incident Response, Agile (Scrum/Kanban)

AWARDS & RECOGNITION

- Star of the Quarter ×3 (2023–24) for end-to-end SaaS release management, platform stability, and performance ownership.
- Star of the Month (multiple, 2022–24) for issue resolution, deployment planning, and service reliability under tight timelines.

PROJECTS & ACTIVITIES

- Machine learning: model training and evaluation on real-world datasets in Python through MSc coursework, thesis, and personal projects; hands-on with LLM APIs and AI-assisted tooling.
- Built a full-stack NGO organ-donor registration portal for I Gift Life and a Django to-do application; reached Round 2 of the Uber HackTag Hackathon. Portfolio: vedantverma.github.io.
- Built a hand-gesture human-computer interface capturing EMG signals via a NodeMCU and translating them into in-game controls.
